

HS3-(5K-12K)-T2-(W, 4G)-YX Quick Guide

This quick guide provides installation operations and product datasheets. For safety precautions and detailed product information, refer to the *User Manual* on the SAJ Website www.saj-electric.com. You can scan the below QR code to access all the product documentation.

NOTICE

- Before installation, operation, and maintenance, read the product documentation carefully.
- ONLY qualified and trained electricians who have read and fully understood all safety regulations contained in this manual can install, maintain, and repair the equipment. The operation personnel should understand the system, its working principles, and relevant national and regional standards.
- During operations, wear protective equipment and use dedicated tools.

☐ 1. Checking the Outer Packing

- Check the outer packing package for any damage, such as holes and cracks.
- Check the equipment model.

If any serious damage is found or the model is not what you requested, do not unpack the product, and contact your dealer as soon as possible.

☐ 2. Checking the Product Packages

Place the connectors separately after unpacking to avoid confusion for connection of cables.

HS3 inverter

				
HS3 inverter	24-pin communication cable connector	Insulated terminals *22	Grid connector (black) kit	Backup connector (grey) kit
				
PV connector x4	Communication cable kit	Rubber plug x2	¹ Printed documents	³ Meter kit

¹The printed documents include a warranty card and a *Quick Guide*, and a *Configuration Instructions*.

²The meter kit contains the following items:

		
Communication cable with an RJ45 connector	Current transformer x3	Smart meter

Package of type A BU3 battery pack

Type A battery has two holes on the left and right sides.

- Battery pack with a base (BU3-5.0-(TV1, TV2)-BASE or BU3-5.0-(TV1, TV2)-PRO-BASE)

				
Battery module	Locking bracket x2	M6*80 expansion bolt x2	M6*50 screw x2 Gasket x2	M5*14 screw x4
				
Cardboard				

- (Optional) Battery without a base (BU3-5.0-(TV1, TV2) or BU3-5.0-(TV1, TV2)-PRO)

				
Battery module	Locking bracket x2	M6*80 expansion bolt x2	M6*50 screw x2 Gasket x2	M5*14 screw *4

Package of type B BU3 battery pack

Type B battery pack has two mounting ears on the rear cover.

- Battery pack with a base (BU3-5.0-(TV1, TV2)-BASE or BU3-5.0-(TV1, TV2)-PRO-BASE)

				
Battery module	Locking bracket x2	M6*80 expansion bolt x2	M6*50 screw x2 Gasket x2	M5*14 screw x4
				
M5*14 screw x4	Cardboard	M4*12 screw (For Australia)	Grounding plate (For Australia)	

- (Optional) Battery without a base (BU3-5.0-(TV1, TV2) or BU3-5.0-(TV1, TV2)-PRO)

				
Battery module	Locking bracket x2	M6*80 expansion bolt x2	M6*50 screw x2 Gasket x2	M5*14 screw *4
				
M4*12 screw x2 (For Australia)	Grounding plate (For Australia)			

Wall-mounting bracket (optional)

		
Battery module	M12*100 expansion bolt *6	M5*14 screw x2

BC3 battery combiner box (optional)

				
Battery module	Communication cable	Positive cable Negative cable (For Europe)	Positive cable Negative cable (For Australia)	Positive connector Negative connector (For Australia)
				
M4*12 screw x2 (For Australia)				

CU2 charger (optional)

				
Charger	Holster	M4*32 screw *4	Expansion bolt *4	M5*14 screw x2

Depending on the battery pack type (A or B) and mounting manner, choose the following installation procedure:

- Type A battery pack in the ground-mounting manner: Step 4
- Type B battery pack in the ground-mounting manner: Step 5
- Type B battery pack in the wall-mounting manner: Step 6

☐ 4. Installing type A battery pack: grounding manner

4.1. Install the base battery (BU3-5.0-(TV1, TV2)-BASE or BU3-5.0-(TV1, TV2)-PRO-BASE)

1. Place the cardboard on to the wall. Drill six holes (8 mm in diameter and 55 mm in depth) on the marked positions on the cardboard. Install the provided expansion bolts into the drilled holes.

2. Use two M5*14 screws to install two locking brackets on both upper sides of the battery. Place the base battery onto the floor. Make sure that:
 - The battery feet are aligned with the vertical black line on the cardboard.
 - It is recommended to use a gradienter to make sure that the battery is placed horizontally.
 - The space between the battery back and the wall surface is 50–65 mm.

3. Align the locking brackets to the drill holes and install M6*50 screws to secure the locking brackets to the wall.

Note: If the battery is installed outdoors, it is suggested to remove the cardboard which is not waterproof.

4.2. (Optional) Install other batteries (BU3-5.0-(TV1, TV2) or BU3-5.0-(TV1, TV2)-PRO)

1. Use two M5*14 screws to install two locking brackets on both upper sides of the battery. Place this battery onto the base battery. Push it downwards.

- On each lower side of the battery: Install two M5*14 screws to secure two batteries.

On each upper side of the battery: Align the locking bracket to the drill hole and install the gasket and M6*50 screw to secure the locking brackets to the wall.

- (Optional) If needed, repeat steps 1 and 2 to install the third battery.

4.3. (Optional) Install the charger (CU2-7.4K-S-I)

1. Get the holster from the charger package. Install the holster onto the right side of the charger.
2. Place the charger onto the battery. Push it downwards.
3. Install M4*32 screws on both lower sides of the charger to secure the charger to the battery.

4. Install the holster on the wall by using three M4*32 screws.

Note: The holster is used to secure the charger cable. You can connect the cable after all installation is completed. It is recommended that you purchase the cable from SAJ.

4.4. Install the inverter (HS3-xk-S2-(W, 4G)-(B, P) or HS3-xK-S2-(W, 4G)-(B, P)-(BE, IE)).

1. (Optional) If you have installed a charger, loosen the screws on the inverter, and remove the port cover, as shown below:

2. Place the inverter onto the battery or charger (if available). Push it downwards. Install screws on both lower sides of the inverter to secure the inverter

to the beneath device (battery or charger; here takes a charger as an example).

Completion View

Example of 3 batteries:

Inverter + charger + batteries

Inverter + batteries

5. Install type B battery pack: grounding manner

5.1. Install the base battery (BU3-5.0-(TV1, TV2)-BASE or BU3-5.0-(TV1, TV2)-PRO-BASE)

1. Get the cardboard from the base battery package. Place the cardboard on to the wall. Drill six holes (8mm in diameter and 55mm in depth) on the marked positions on the cardboard. Install the provided expansion bolts into the drilled holes.

2. Use two M5*14 screws to install two locking brackets to the mounting ears on the top of the battery pack. On the desired installation site, place the base battery on the floor. Make sure that:
 - The left and right battery bases are aligned with the vertical black lines on the cardboard.
 - The battery pack is placed horizontally. (It is recommended that a gradienter be used.)
 - The space between the battery back and the wall surface is 40–50 mm.

- On the top of the battery pack, align the locking brackets to the drilled holes and install M6*50 screws to secure the locking brackets to the wall.

Note: If the battery is installed outdoors, it is suggested to remove the cardboard which is not waterproof.

5.2. (Optional) Install other batteries (BU3-5.0-(TV1, TV2) or BU3-5.0-(TV1, TV2)-PRO)

Note: In one stack, up to three batteries are supported.

1. Use two M5*14 screws to install two locking brackets to the mounting ears on the top of the battery pack. Place this battery onto the base battery and push it downwards.

2. On the top of the battery pack, align the locking brackets to the drilled holes and install the gaskets and M6*50 screws to secure the battery pack to the wall.

On the left and right bottom sides of the battery pack, install M5*14 screws to secure two batteries.

Australia only: As shown in the right figure, install the metal grounding plate and secure it by installing two M4*12 screws.

- (Optional) If needed, repeat steps 1 and 2 to install the third battery.

Australia only: Install the metal grounding plate and secure it by installing two M4*12 screws.

5.3. (Optional) Install the charger (CU2-7.4K-S-I)

1. Get the holster from the charger package. Install the holster onto the right side of the charger.
2. Place the charger onto the battery. Push it downwards.
3. On the left and right bottom sides, install M5*14 screws to secure the charger to the battery.

Australia only: As shown in the right figure, install the metal grounding plate and secure it by installing two M4*12 screws.

4. Install the holster on the wall by using three M4*32 screws.

Note: The holster is used to the charger cable. You can connect the cable after all installation is completed. It is recommended that you purchase the cable from SAJ.

5.4. Install the inverter (HS3-xk-S2-(W, 4G)-(B, P) or HS3-xK-S2-(W, 4G)-(B, P)-(BE, IE))

- (Optional) If you have installed a charger, loosen the screws on the inverter, and remove the port cover, as shown below:

- Place the inverter onto the battery or charger (if available). Push it downwards. Install screws on both lower sides of the inverter to secure the inverter to the beneath device (battery or charger; here takes a charger as an example).

Completion View

Example of 3 batteries:

Inverter + charger + batteries

Inverter + batteries

6. Install type B battery pack: wall-mounting manner

6.1. Install the wall-mounting bracket

1. Place the mounting bracket onto the wall. Mark six holes. Remove the bracket.

2. Drill six holes according to the marked positions on the wall.

3. Install the mounting bracket on to the wall.

6.2. Install the base battery (BU3-5.0-(TV1, TV2)-BASE or BU3-5.0-(TV1, TV2)-PRO-BASE)

1. Get the cardboard from the base battery package. Place the cardboard on to the wall. Place the cardboard onto the wall by aligning the vertical lines with the bracket edges.

2. Drill six holes (8mm in diameter and 55mm in depth) on the marked positions on the cardboard. Install the provided expansion bolts into the drilled holes.

3. c. Use two M5*14 screws to install two locking brackets to the mounting ears on the top of the battery pack. Place the base battery onto the floor.

Make sure that:

- The battery feet are aligned with the vertical black line on the cardboard.
- It is recommended to use a gradienter to make sure that the battery is placed horizontally.
- The space between the battery back and the wall surface is 40–50 mm.

- On the top of the battery pack, align the locking brackets to the drilled holes and install M6*50 screws to secure the locking brackets to the wall.
Secure battery to the bracket by tightening two M6*14 screws.

Note: If the battery is installed outdoors, it is suggested to remove the cardboard which is not waterproof.

6.3. Install other required devices

For details, refer to same procedure (steps 5.2 to 5.4) in the ground mounting manner.

- (Optional) Battery without a base (BU3-5.0-(TV1, TV2) or BU3-5.0-(TV1, TV2)-PRO): Step 5.2
- (Optional) Charger (CU2-7.4K-S-I): Step 5.3
- Inverter (HS3-xk-S2-W-B, HS3-xk-S2-W-P, HS3-xk-S2-4G-B, or HS3-xk-S2-4G-P): Step 5.4
- (Optional) Battery combiner box (BC3-TV): Step 7

☐ 7. (Optional) Install a Battery Combiner Box (BC3-TV)

One inverter supports up to eight batteries; however, for safety reason, a maximum of three batteries can be installed vertically in one stack. Therefore, extra batteries must be installed in other stack(s) and the extra battery stack must be installed with a battery combiner box (BC3-TV). Due to the cable length limitations, the distance between each battery stack is 0.5 meter.

It is recommended that the batteries be assembled in different stacks as follows:

Quantity of batteries supported by one inverter	Quantity of battery stacks	Quantity of batteries in each stack
1, 2, or 3 batteries	1 stack	1
4 batteries	2 stacks	2, 2
5 batteries	2 stacks	3, 2
6 batteries	2 stacks	3, 3
7 batteries	2 stacks	3, 2, 2
8 batteries	3 stacks	3, 3, 2

- Place the combiner box onto the battery. Push it downwards.

On a type A battery pack

On a type B battery pack

2. Depending on the battery type, perform as follows:

- Type A battery pack: Install screws on both lower sides of the junction box to secure the junction box to the beneath battery.

- Type B battery pack: Install screws on both lower sides of the junction box to secure the junction box to the beneath battery.

Australia only: Install the metal grounding plate and secure it by installing two M4*12 screws

Completion View

Example of 8 batteries:

8. Assembling the AC-side electrical connection

1. Open the AC-side Cover.

2. Connect the grounding cable, by taking AC-side grounding as an example.

The cable needs to be prepared by the user. It is recommended that a 6- mm² conductor cross-sectional area of cable be used.

- a. Assemble the cable and OT/DT terminal.

- b. Remove the M4*10 screw from the grounding port. Connect and secure the grounding cable, as shown below:

3. (4G model only) Install the SIM card: Loosen the cover of the SIM card slot. Then, insert the SIM card to the slot.

4. (W model only) Install the LAN cable, if you choose to use the Ethernet connection manner.
 - a. Remove the RJ45 cable fastener from the LAN port.
 - b. Use a standard RJ45 cable. Insert the cable through the cable fastener as shown below. Assembly the cable fastener.
 - c. Connect the LAN cable from the LAN port on the inverter to the router.

5. Install the EMS cable.

- a. Connect the cable from the EMS port on the inverter to the LAN port on SAJ eManager (EMS). Remove the RJ45 cable fastener from the EMS port.
- b. Use a standard RJ45 cable. Insert the cable through the cable fastener as shown below. Assembly the cable fastener.
- c. Connect the cable from the EMS port on the inverter to the LAN port on SAJ eManager (EMS).

6. Install a circuit breaker.

For safety operation and regulation compliance, install a 63 A or higher air circuit breaker between the grid and the inverter.

7. (Optional) Install an RCD.

If the external RCD must be installed according to the local regulations, either type A or type B RCD can be installed with the action current 300 mA or higher.

8. Connect the grid and backup loads.

Recommended cable specification:

Conductor cross-sectional area of cables		Conductor material
Scope	Recommended value	Copper
1.5 – 6 mm ² or 16 – 10 AWG	6 mm ² or 10 AWG	

- a. Strip the insulation off (13-mm length) the cables.
- b. Thread the cables through the cable glands of the connectors and secure the cables with a spanner.

Note: The black connector is for grid connection and the grey connector is for backup load connection.

- c. Connect the cables to the GRID and BACKUP ports on the inverter.

9. Assembling the communication connection.

a. Disassemble the communication cable connector.

- ① Press the tabs on two sides of the connector and pull the connection terminal block outwards.
- ② Rotate the nut anti-clockwise and remove it from the connector body.
- ③ Remove the rubber plugs out of the seals.

b. Connect all communication cables to the communication cable connector.

① Prepare cables.

- Meter communication: Use the provided communication cable kit. It contains a communication cable with an RJ45 port and two assembled terminals and cable fastener parts.

- Other terminal connection: Per you needs, prepare cables. Strip the insulation around 7.5 mm on cable ends and if needed, use provided insulated crimp terminals on the cable ends.

Suggested cable specifications:

- DO: 0.5-0.75 mm²
- Others: 0.2-0.5 mm²

- ② Insert all communication cables through the nut, seals, and body of the connector.

- ③ Locate the ports and terminals on the connection terminal block according to their silkscreens.
For detailed pin definition, refer to section “Assembling the Communication Connection” in the User Manual.

c. Connect and secure the cables to the connection terminal block. Then, assemble the communication cable connector.

- ① Connect cables to corresponding terminals and RJ45 ports based on your needs.
- ② Use a screwdriver to secure the cables connected to the terminals.

Note: If any terminal that has been equipped with a 120 Ω resistor, such as METER-A, needs to be connected by a cable with the length longer than 20 meters, switch the resistor to ON status.

- ③ Insert the connection terminal block back to the connector body until you hear a click sound.
- ④ Insert the seals and nut back to the connector body.
- ⑤ Rotate the nut clockwise until it is secured to the connector body.

- d. Connect the assembled communication terminal connector to the COMM port on the inverter.

- e. Connect the other end of the cables to external devices, such as the meter.

Note: For meter connection, use the communication cable provided in the meter kit package. Connect the RJ45 connector on one end to the RJ45 port of the meter communication cable that you have just connected to MET_A and MET_B on the communication terminal connector. Connect the two crimped cable ends on the other end to ports 24 and 25 on the meter.

10. Close the AC-side cover.

9. Assembling the DC-side Connection

1. Open the DC-side cover.

Loosen the screw that locks the cover. Then, lift the cover upwards.

2. Connect the PV cables.

WARNING

- Dangerous to life due to electric shock when live components or DC cables are touched.
- The PV panel string will produce lethal high voltage when exposed to sunlight. Touching live DC cables results in death or lethal injuries.
- DO NOT touch non-insulated parts or cables.
- Disconnect the inverter from voltage sources.
- DO NOT disconnect DC connectors under load.
- Wear suitable personal protective equipment for all work.

Recommended cable specification:

Conductor cross-sectional area of cables (mm ²)		Conductor material
Scope	Recommended value	Outdoor copper wire cable, complying with 600 V DC
5.0 – 6.0	6.0	

Before you start, verify that:

- The PV array is properly insulated to ground before it is connected to the inverter. The inverter cannot be used with functionally earthed PV arrays.
 - The DC switch on the inverter is in OFF position to avoid short circuit caused by maloperations.
- (For Australia) To comply with local regulations and for further safety consideration, use a reliable tool (such as a lock with a key) to lock the switch, so that others cannot unlock it easily.

- Use a 3-mm wide-bladed screwdriver to strip the insulation layer around 8 to 10 mm length from one end of each cable.

- b. Insert the cable ends to the sleeves. Use a crimping plier to assembly the cable ends.

- c. Insert the assembled cable ends into the blue positive and negative PV connectors. Gently pull the cables backwards to ensure firm connection.

- d. Tighten the lock screws on the positive and negative cable connectors.

- e. Insert the positive and negative cable connectors into the positive and negative PV ports on the inverter until you hear a “click” sound to ensure firm connection.

3. (Optional) Connect the battery cables between multiple stacks.

- a. Prepare and connect the grounding cable to the battery combiner box.

- b. Use the positive and negative power cables and the communication cable that are shipped with the battery combiner box. Connect the cables from the combiner box to the inverter, as listed below:

Cable	From the combiner box	To the inverter
Positive and negative power cables	BAT+ and BAT- ports	BAT+ and BAT- ports
Communication cable	BMS/CAN port	BMS CAN port

Notes:

- The BMS/CAN port on the inverter has been installed with an RJ45 connector plug. In this case, remove this plug and insert it into the BMS/CAN port on the battery combiner box on the left stack.
- The provided cables have been assembled with connectors. In some special cases, if you need to use your own cables, contact SAJ for technical support.

Taking 8 batteries connecting to one inverter as an example:

4. Close the DC-side cover.

Push the cover downwards. Use a screwdriver to tighten the screw to lock the cover securely.

10. Starting the system

1. (Optional) If there are multiple battery stacks, turn on the battery switch on the right side of the battery combiner box.
2. On the left side of the inverter, perform as follows:
 - a. Turn on BATTERY SWITCH.
 - b. Turn on DC SWITCH.
 - c. Press and hold the START button for two or three seconds until the LED indicator on the front panel is on .
3. Check the LED indicator status on the inverter panel to ensure that the inverter is running properly.

LED indicator	Status	Description
	Off	The inverter is powered off.
	Breathing 6s	The inverter is in initialization or standby state.
	Solid on	The inverter is working properly.
	Breathing 3s	The inverter is upgrading.
	Solid on	The inverter is not working properly.
 System	Integer (example, 50)	Battery average SOC (for example, 50%)
	--	The battery communication is lost.
 Battery	Solid on	The battery is working properly.
	On 1s, off 1s	The battery is not working properly.
	Off	The battery is disconnected or inactive.
 Grid	Solid on	The grid is connected and working properly.
	On 1s, off 1s	The grid is not working properly.
	Off	No grid is detected.
 PV	Solid on	The PV array is working properly.
	On 1s, off 1s	The PV array is not working properly.
	Off	The PV array is not working.
 Backup	Solid on	The AC-side load is working properly.
	On 1s, off 1s	The AC-side load is overloaded.
	Off	The AC-side load is disconnected or off.
	Solid on	In good communication with the meter, BMS, and cloud.

 Communication	On 1s, off 1s	Lost communication with the meter, BMS, or cloud.
	Off	Lost communication with all the meter, the BMS, and cloud.
 EV charger	Solid on	The EV charger is in standby mode and working properly.
	On 1s, off 1s	The EV charger is charging.
	On 1s, off 3s	The EV charger is not working properly.
	Off	The EV charger is disconnected.

- Configure the system on the SAJ App named Elekeeper (used to be called eSAJ Home). For details, refer to the section “System Commissioning” in the *SAJ Configuration Instructions*.
- If any error occurs, check the error code displayed on the App. For detailed error messages, refer to the section “Troubleshooting” in the *User Manual*.

Ingress Protection	IP65				
Dimensions [H*W*D] [mm]	450*695*170				
Weight [kg]	34				
Warranty [Year]	Refer to the warranty policy.				

Battery datasheet

Model Parameter	BU3-5.0-(TV1, TV2), BU3-5.0-(TV1, TV2)-BASE	BU3-5.0-(TV1, TV2)-PRO, BU3-5.0-(TV1, TV2)-PRO-BASE
Rated Capacity [Ah]	100	
Rated Energy [kWh]	5.0	
Usable Energy [kWh]	4.5	
Dimension (H*W*D) [mm]	- With the base: 420*695*170 - Without the base: 370*695*170	
Weight [kg]	- With the base: 53 - Without the base: 52	
Nominal Voltage [V]	450	
Operating Voltage [V]	380 – 500	
Max. Charging Current [A]	7.9	
Max. Discharging Current [A]	7.9	
Battery Designation	IFpP170/695/370/(1P16S)M/-10+50/90	
Ingress Protection	IP65	
Mounting	- Ground-mounting - Wall-mounting	
Operating Temperature Range	- Charging: 0°C to 50°C - Discharging: -10°C to +50°C	-30°C to 50°C
Storage Temperature Range	-10°C to 40°C	
Ambient Humidity	5 – 95% non-condensing	
Altitude	<3000 m	
Cooling Method	Natural convection	
Communication	CAN	
Warranty [Year]	Refer to the warranty policy.	

Battery combiner box datasheet

Model Parameter	BC3-TV
Communication Port	CAN
Dimension [mm] (H*W*D)	150*695*170

Weight [kg]	5.3
-------------	-----

Charger datasheet

Parameter	Model	CU2-11K-T-I
Input		
Power supply		3+N+PE
Rated Voltage [V AC]		400, $\pm$ 20%
Rated Current [A]		16
Frequency [Hz]		50/60
Output		
Output Voltage [V AC]		400, $\pm$ 20%
Max. Current [A]		16
Output Power [kW]		11
Power Consumption (standby) [W]		5
Efficiency		
Euro Efficiency		$\geq$ 99%
Power Metering		
Precision		2%
User Interface		
Charging Outlet		Type 2
Housing Material		- Chassis: SGCC (T=1.2 mm) - Cover: SGCC (T=2 mm)
Start Mode		Plug and Play (PnP) + App
Communication		
Communication		Wi-Fi 2.4G only
Protocol		OCPP 1.6 JSON
Frequency Bandwidth [MHz]		2400 – 2483.5 (Wi-Fi)
Max. RF Output Power		<20 dBm (-10 dBW)
Safety		
RCD		Type A + 6 mA DC (Type A RCBO prepared by users) Optional: embedded RCD
Ingress Protection		IP54
Impact Protection		IK08
Electrical Protection		- Over current protection - Residual current protection - Surge protection - Over/Under voltage protection - Over/Under frequency protection - Over temperature protection
Certification		- EN IEC 61851-1: 2019 - IEC 62955: 2018 - EN IEC 61851-21-2: 2021 - EN 61000-6-1: 2019 - EN 61000-6-3: 2021 - EN 300 328 V2.2.2:2019 - EN 301 489-1 V2.2.3:2019 - EN 301 489-3 V2.1.1:2019 - EN 301 489-17 V3.2.0:2017
Warranty		Refer to the warranty policy.
Environment		

Working Temperature	-30°C to +50°C
Storage Temperature	-40°C to +60°C
Ambient Humidity	5 – 95% non-condensing
Working Altitude	≤ 2000 m
Cooling Method	Natural convection
EMC	Class B
Package	
Product Dimension [mm] (H*W*D)	160*695*170
Weight [kg]	9

Installer: _____
